

# SoundEdit

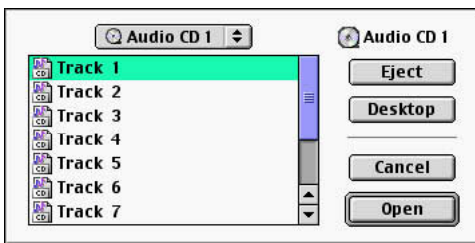

## ripping audio files from CD

---

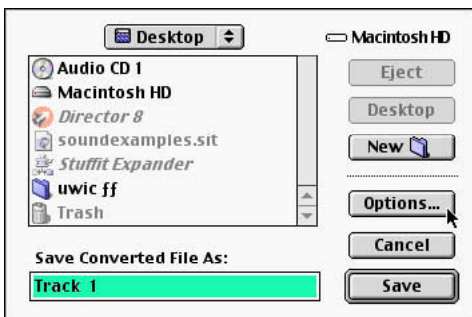

### Step 1:

Either go to the 'Xtras' menu and select 'Convert CD Audio..' or if the toolbar is visible click on the CD icon.

### Step 2:

Select the track you wish to convert to an audio file.

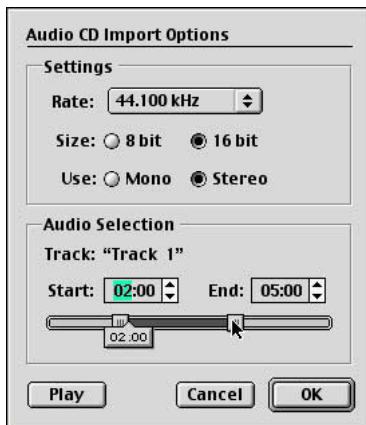

### Step 3:

Before saving the audio file click the 'Options' button to check the conversion settings.

# SoundEdit

ripping audio files from CD

---

## Step 4:

Select the appropriate settings for the import options. To import CD quality audio select a sampling rate of 44.1 kHz, 16 bit and stereo.

In the lower section of the window select how little or how much of the track you wish to import. When you are ready click 'OK' and SoundEdit will begin to convert the audio file.

## Step 5:

When the process has finished the extracted audio file will be visible on screen and available for editing.
